The Definition of Art

Danto begins his book by asking the question, "What is art?" He argues that there is no one answer to this question, because the definition of art has changed over time. In the past, art was defined as the imitation of nature. However, in the 20th century, artists began to experiment with new forms of art, such as abstract expressionism and conceptual art. These new forms of art challenged the traditional definition of art, and Danto argues that we need to adopt a new definition that is more inclusive.

Danto proposes that art is anything that is created with the intention of being art. This definition is broad, but it allows us to include all of the different forms of art that have been created throughout history. Danto argues that art is not simply a matter of aesthetics. It is also a matter of intention. If an artist creates something with the intention of it being art, then it is art, even if it does not meet our traditional expectations of what art should be.

The Relationship Between Art and Philosophy

Danto argues that art and philosophy are closely related. He believes that art can be a source of philosophical insight, and that philosophy can help us to understand art. Danto's work on the philosophy of art has had a profound impact on both art theory and philosophy. He has helped to bridge the gap between the two disciplines, and he has shown us that art is a complex and multifaceted phenomenon that can be studied from a variety of perspectives.

The Role of the Artist in Society

Danto believes that artists play an important role in society. He argues that artists help us to see the world in new ways, and that they can challenge our assumptions about what is possible. Danto also believes that artists can help us to understand ourselves better. By creating art, artists can express their own unique perspectives on the world, and they can help us to see the world from their point of view.
